

“WE ARE ALL ANIMALS”

We are all animals, that share many features

We are uniquely created, divine creatures

No model has ever been able to replicate

Our physical functions or emotional states

We drink the same water, we breathe the same air,

Our lifestyles are amenable for Science to compare

To unravel the misteries of illness and pain

That despite the advances still do remain

If doctors and vets progress to work side-by-side

In a joint effort to fight disease and ban the divide

There's a wealth of knowledge they'll be able to share

To improve patients' lives and quality of care

A new world can start in a Petri dish

And transform the lives of both ends of the leash.

The fight for humans and animals' lives and dreams

Just relies on wisdom and the care of teams.

Four paws, two hands can go far beyond

And nurture and honor a precious bond.

Hand-in-paw, with faith in the power of will

And the promise of a brighter future to fulfill.
