

Science

Genetics and Adaptation

Activity: Compare human and animal DNA, exploring shared genetic traits, and why One Medicine is valid and achievable.

Task: Research genetic adaptations in humans and animals that help them survive in their environments. Present findings visually eg. charts, diagrams or as a written piece.

English

Exploring Perspectives

Activity: Write a reflective essay or fictional story exploring the relationship between humans and animals, focusing on empathy, coexistence and our similarities with each other.

Task: Use a prompt like 'If I woke up as [animal], how would I see the human world?' to inspire creative writing.

Art

Mixed Media and Symbolism

Activity: Create a piece of art using mixed media to represent the emotional or physical similarities and/or connections between humans and animals.

Task: Students might focus on themes like protection, empathy, or coexistence, using animals as symbols.
